## **DETAILED ACTION**

## Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-4, 6-16, 18-24, drawn to the use of phenylcoumaran benzylic ether reductase to modulate plant biomass, or a method to modulate plant biomass, or wherein said use or method comprises a repression of the activity of phenylcoumaran benzylic ether reductase, or wherein said repression is through cosuppression RNAi, or a genetically modified plant expressing phenylcoumaran benzylic ether reductase RNAi.

Group II, 1-3, 5, 6-15 and 17-24 drawn to the use of phenylcoumaran benzylic ether reductase to modulate plant biomass, or a method to modulate plant biomass, or wherein said use or method comprises a repression of the activity of phenylcoumaran benzylic ether reductase, or wherein said repression is through antisense RNA, or a genetically modified plant expressing phenylcoumaran benzylic ether reductase antisense RNA.

The inventions listed as Groups I-II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The technical feature linking Groups I-II appear to be phenylcoumaran benzylic ether reductase that modulates plant biomass. However, Mijnsbrugge et al. (Planta, 211:502-509, 2000, Applicant's IDS) teach that phenylcoumaran benzylic ether reductase is strongly associated with lignification during wood development.

Therefore, the technical feature linking the inventions of Group I and Group II does not constitute a special technical feature as defined by PCT Rule 13.2, as it does not define a contribution over the prior art.

Accordingly, Groups I-II are not so linked by the same or a corresponding special technical feature as to form a single general inventive concept.

Application/Control Number: 10/531,479

Art Unit: 1638

The special technical feature of Group I is considered to be modulation of phenylcoumaran benzylic ether reductase activity through RNAi.

The special technical feature of Group II is considered to be modulation of phenylcoumaran benzylic ether reductase activity through antisense RNA.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Vinod Kumar whose telephone number is (571) 272-4445. The examiner can normally be reached on 8.30 a.m. to 5.00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Anne Marie Grunberg can be reached on (571) 272-0803. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should
